## Work Experience

**Software Engineer** June 2025 – May 2026
*Atomxel ( Internship )* *Noida, India*

- Accelerated Bridg e-commerce launch by **30%** and consolidated the backend stack by migrating legacy PHP CodeIgniter routes to Node.js/Express and integrating Google Places/Razorpay APIs to support automated ordering across 4 order types.
- Improved operational efficiency for **10K+ users by 45%** by redesigning Orbit loyalty platform with automated attendance tracking, anti-spoofing location verification, and real-time alarm notifications to prevent attendance fraud.
- Automated technician dispatch and billing workflows on Bridg by engineering a complete service flow from scratch (admin backend and mobile apps) featuring automated invoicing and online/COD payment systems to eliminate manual dispatching.
- Achieved **100%** audit accuracy for travel reimbursement by developing a full-stack cumulative distance tracking system (GPS sensor tracking to backend aggregation) with exportable consolidated summaries to replace manual travel logs.
- Ensured compliance with strict **16KB app size limits** while enabling dynamic branding by refactoring 4 production apps (Bridg, Orbit, JMP, S Mobility) to load style configurations dynamically from a tenant admin panel to satisfy Play Store constraints.
- Slashed critical API response times by **95%** (from 32s to 1.3s) by profiling database queries, establishing indexes, and optimizing payload serialization to resolve system timeouts under concurrent user loads.

## Technical Skills

**Languages**: JavaScript, TypeScript, HTML, CSS, Dart, PHP, Kotlin
**Frontend**: React.js, Next.js, Flutter, Tailwind CSS, Bootstrap, SCSS
**Backend**: Node.js, Express.js, PHP (CodeIgniter, laravel), RESTful APIs
**Databases**: MongoDB, MySQL, Mongoose
**Tools**: Git, JWT, Razorpay, Google Places API, Recharts, Multer, bcryptjs
**Concepts**: ACID Transactions, API Versioning, Payment Integration, Cryptographic Verification

## Projects

**thePaymentApp** | *React, Node.js, Express, MongoDB, Razorpay, JWT, Zod, Tailwind CSS* | Live Aug 2025

- Engineered a secure digital wallet supporting real money transactions with Razorpay; implemented three-layer defense (HMAC signing, server-side balance verification, and automated reconciliation) to eliminate payment exploits and ensure zero inconsistencies via ACID transactions.
- Optimized user interface with React and Tailwind CSS, achieving **95% mobile responsiveness** and reducing navigation friction by **40%** using real-time balance polling and intuitive user search features.

**AlTogether** | *React.js, Node.js, Express.js, MongoDB, JWT, Tailwind CSS, Recharts* 2025

- Built a full-stack task management system supporting **100+ concurrent CRUD operations** with MongoDB aggregation pipelines, featuring an interactive Recharts dashboard that increased productivity visibility by **60%**.
- Implemented secure JWT authentication with refresh token rotation and file upload support via Multer, alongside a paginated REST API to optimize data fetching performance at scale.

## Education

**Indira Gandhi National Open University (IGNOU)** Delhi, India
*Bachelor of Computer Applications* *Jan 2025 – Dec 2027*
